Streamlining data management processes
with Kyloe DataTools

What problems were you aiming to solve with Kyloe DataTools?

Our decision to adopt Kyloe DataTools stemmed from two pivotal reasons, which have significantly enhanced our data management practices and overall efficiency.

- *The first key benefit we experienced through Kyloe DataTools is its capability to identify and merge duplicates within our database. By streamlining the process of identifying duplicate entries and merging them seamlessly, our data has become considerably cleaner and more accurate. This not only improves the reliability of our records but also optimizes the performance of various processes that rely on the database.*

- *The second significant advantage of Kyloe DataTools is its ability to conduct mass updates on fields that are otherwise inaccessible through Bullhorn. This functionality empowers us to efficiently update and maintain critical information in bulk, saving valuable time and effort that would have been otherwise expended in making individual updates.*

How has Kyloe DataTools transformed Greystone Recruitment?

Kyloe DataTools offers us comprehensive solution for data management, including duplicate identification and merging, efficient mass updates, and enhanced accuracy in identifying records, leading to a streamlined and highly effective data management process.

It's a highly beneficial extension for Greystone that enhances the utilization of Bullhorn. It has a user-friendly platform and offers seamless integration through an API link, empowering us to maximize our productivity and efficiency while utilizing Bullhorn to its fullest potential.
