

## Kyløe DataTools - Bullhorn data management

While migrating to Bullhorn with Kyløe, Talent International detected a large amount of historical and inaccurate information stored within their old database, and they were looking for a way to clean it up. Our Bullhorn data management solution stood out due to its ability to apply mass data updates, dedupe records, and identify non-relevant information to streamline internal processes and maximise their Bullhorn Automation integration.

*"Kyløe DataTools is a no-brainer for us. It helps us overcome some known Bullhorn limitations and help us manage complex data rules in bulk."*

*"Kyløe DataTools is a must-have extra layer to complement our integrations like Bullhorn Automation. It allows us to mass update all entities where Bullhorn native solutions can't, like Jobs or Placements. Having this control improves the performance of our Bullhorn automations."*

Talent International

### Profile: Talent International

- Established: 1995
- Industry: Banking, Technology, Energy, FMCG and Government
- Region: Australia
- Employees: 900+

### Put data management on autopilot and ensure accuracy across Bullhorn

Kyløe originally partnered with Talent International to implement Bullhorn from JobScience and Kyløe AwesomeDocs. As part of this migration, issues with their legacy data came to light, to help solve this, we recommended Kyløe DataTools: our data management solution for Bullhorn that has been used to update over 38 million Bullhorn records.

### Talent International challenges

- Too much time spent manually updating different fields and statuses in Bullhorn
- Legacy data quality issues from their former CRM were detected when migrating
- A high volume of duplicate records following the database merge
- Not being able to update all entities where Bullhorn native solutions can't

### Talent International objectives

- Reduce the amount of time spent manually maintaining Bullhorn data
- Being able to manipulate and automate data updates in bulk to maintain data quality (close Job when Placement is set to Approved)
- Automatically update statuses in Bullhorn so Talent International back-office team can stay on top of everything and ensure data accuracy (eg daily update Contacts, Candidates records when a Placement is Approved)
- Mass update all Bullhorn entities to maximise their Bullhorn Automation integration

# Kyloe DataTools - Bullhorn data management

## The solution

Kyloe DataTools, the most powerful Bullhorn data management solution that makes data quality easy. It empowers you to automatically dedupe, identify gaps and make mass updates to improve all your automations and enhance the value of your Bullhorn reporting.

Automatically find and dedupe duplicated Bullhorn records

Standardise and mass update Bullhorn data

Identify and improve incomplete and outdated records

## The results

Dramatically reduce time managing data issues across the entire database

Leverage other integrations performance, such as Bullhorn Automation

Increased productivity and maintain data quality by automatically running data updates

# Kyloe™ DataTools

The most powerful Bullhorn data management solution. Kyloe DataTools empowers you to make changes that will enhance the value of your Bullhorn reporting and improve your automations.

## Why Kyloe DataTools?

Your Bullhorn CRM sits at the heart of your business, but the data within it can become duplicated, inaccurate and inconsistent if you don't keep a regular eye on it.

Kyloe DataTools gives you everything you need to automatically dedupe, identify gaps, and make mass data updates at your fingertips.

## Benefits

### Transform your data

Unlock the ability to make mass updates to your Bullhorn data, without the cost, time investment and scripting knowledge normally needed – Kyloe DataTools takes care of the hard part for you.

### More accurate reporting

Your data is always decaying - a one-time fix isn't enough. Base your reporting (and decisions) on up-to-date data that you can trust. Kyloe DataTools sets a great foundation for Canvas and other reporting tools.

### Run successful automations

Running automations that aren't working as you'd hoped? It's likely that you're hitting roadblocks due to dirty data – Kyloe DataTools helps fix this and enables you to get more ROI on automations such as Herefish.
